Safe, Reliable & Efficient

BetaMCB

Compared to a traditional fuse, MCBs are designed to operate accurately under both overloading and short-circuit conditions. Unlike a fuse, MCBs can also be reset quickly after they trip. RCCBs play an equally important role by automatically detecting and disconnecting the circuit whenever a fault occurs or the current exceeds the rated sensitivity. The MCBs and RCCBs from **Fabeo** are housed in a plastic casing that is made of flame-retardant, high-strength plastic. The quality of the material used and its design ensures that these devices are highly durable and appear new in spite of their use.

A POWER THAT SAVES YOU

BE PERFECTLY **SECURE** WITH US.

Safety is not an option. That is precisely why it becomes the most important constituent in the making of FABEO BetaMCBs, & Protection Devices such as MCBs, with utmost prominence to the ergonomics, Febeo BetaMCBs blend aesthetics, functionality, and safety together.
